

Financing WinS in Nepal

ILE WinS

Nov 11, 2019

**Sandhya Chaulagain
WaterAid Nepal**

Key outlines

- Background and issues
- Interventions conducted,
- Results and Impact
- Key messages and Scale up

Background and issues

In 2010

- Only 64% of the schools had toilet facilities
- Only 40% schools had separate toilet for girls
- On an average 127 students had to use one toilet

Interventions conducted

In 2010

With the announcement of constructing 10,500 separate toilets for girl students, government allocated NPR 2.5 billion for WinS in 2010 (NPR 1.1 billion for the construction of girl friendly toilets and remaining for external environment improvement)

In between 2010 to 2016 government allocated

NPR 3.7 billion for the construction of girl friendly toilets

NPR 3.7 billion for external environment improvement of the schools

NPR 400 million for the construction of common toilets

NPR 50 million for the management of drinking water in schools

NPR 35 million for the maintenance work

Per unit cost allocation for girl friendly toilet reached to NPR 400 thousand in 2014-2016 from NPR 200 thousand in 2010

Results and impact 2016 – 2019: SDG period

- Schools with separate toilet for girls increased to 70 % in 2016 from 40% in 2010
- School with toilet facilities increased to 85 % in 2016 from 64% in 2010
- Girls student to toilet ratio reached to 106 in 2016 from overall students to toilets ratio 127 in 2010
- Boy's student to toilet ratio (including common toilet) reached to 47% in 2016
- Ratio of school with water supply facility reached to 87% in 2016
- With improvement in status -started to allocate budget in single heading 'WASH Facilities' from 2016/17 @ NPR 700 million (Toilets with drinking water facilities)
- Formulated WinS Procedure 2018; 1 toilet for girl 25 girls and 1 toilet for 40 boys

Key messages and Scale up option 2016 – 2030: SDG period

- Additional 115 thousand girl friendly toilets are required to meet 1 toilet for 25 girls and 14 thousand boys toilets are required to meet 1 toilet for 40 boys, requiring a total of NPR 91 billion for the period 2016 to 2030 i.e NPR 6 billion per annum
- Average budget allocation in WinS per annum is NPR 982 million in the last five years, which is less than one sixth of the requirement to meet the target by 2030.
- Government must increase budget in WinS at least by 6 times than the current allocations to meet the target. Sensitization of the issue and orientation of WinS procedure to federal and local governments can be helpful.

Thank you
